## Favorite Teacher Still Creating Computer Specialists

By Michael Curtis  
Greene Publishing, Inc.

From his time as Teacher of the Year at Madison County High School, to his work achievements as a training specialist and author for Novell, Warren Wyrostek, M.Ed, M.Div, MCNI, NAI, has maintained a singular theme; prepare his students to capture a place in the lucrative world of technology. Possessing a tremendous gift for instruction, Wyrostek recognizes the benefits available in software and computer professions in general, and that these opportunities can extend to any size community, including Madison.

"There are opportunities, both locally and around the world, for students to work with the programs that run many of the computer systems of both public and private companies. NFCC, and even high school students, can really benefit from Novell and Microsoft training. I've participated in Cisco training as well, which is currently on the curriculum at NFCC," Wyrostek explained.

"My increased certifications are devoted to adult-techni-

cal/trade education. I've had the fortune of acquiring my technical and trade skills from some of the finest in the world, and I love sharing the secrets that others have shared with me," he went on to say.

**Warren Wyrostek is the favorite instructor of both teens and adults.**

Whether through a formal curriculum, or as an informal club, Wyrostek believes instruction can begin early, and he certainly practices what he preaches. Having served as both instructor and advisor, Wyrostek has worked relentlessly to ensure computer systems and instruction is up to date. Those he has supported include instructors at both MCCH and NFCC, not to mention dozens and dozens of practitioners. His certifications include the highest designations at Novell, Microsoft and Cisco.

Wyrostek's industry recognition extends from his participation in the Dataflex scholarship program in 1996 in Tallahassee, to a very flattering 2005 article written by Dean Poling in the Valdosta Daily Times titled, "A Man of Change, Author is latest career choice for teacher," referring to his best-selling book about Novell NetWare.

Prior to these industry accolades, earlier in the 90's, Wyrostek was named Teacher of the Year several times at Madison County High School where he taught Honors Chemistry and Honors Physics. "I love working with my students, and contributing in any

way I can to prepare them for the opportunities out there," Wyrostek noted.

Whether through a formal curriculum, or as an informal club, Wyrostek believes instruction can begin early, and he certainly practices what he preaches. Having served as both instructor and advisor, Wyrostek has worked relentlessly to ensure computer systems and instruction is up to date. Those he has supported include instructors at both MCCH and NFCC, not to mention dozens and dozens of practitioners. His certifications include the highest designations at Novell, Microsoft and Cisco.

Wyrostek didn't always like technology. And when the school system wanted him to learn to operate its new Novell system, Wyrostek was initially reluctant. "In that first hour, I knew where my career was going," he says. Evidently, that prediction was accurate and then some.

One may visit Wyrostek's website at [www.3wscertification.com](http://www.3wscertification.com), where training schedules, classes, useful articles and a calendar of events can be found. A Pinetta resident, Wyrostek may be counted among the resources of Madison County.
